

MENDOCINO FOREST PRODUCTS COMPANY, LLC

Manufacturing Engineer

Mendocino Forest Products Company, LLC, located in Ukiah, California, is a leading supplier of sustainable forest products. We are looking for two Manufacturing Engineers to join our growing team. GREAT OPPORTUNITY AND EXCELLENT BENEFITS! These positions will be based in Ukiah, California. Bachelor of Science degree (B.S.), in Industrial Engineering, Mechanical Engineering, Manufacturing Engineering or similar field, from four-year, fully accredited college. 2–5 years of manufacturing or operations experience related to production functions, particularly in the forest products business and sawmill operations, would be a decided plus. Six Sigma, continuous improvement and/or Lean Manufacturing knowledge and experience is a plus. Additional responsibilities include the following:

- Identify, evaluate, and recommend changes or improvements to operational processes, procedures and equipment and provide supporting analysis;
- Analyze and interpret both quantitative and qualitative data utilizing various statistical, quality and decision making tools;
- Lead and facilitate process improvement teams within the framework of Six-Sigma focusing on projects demonstrating significant financial impact;
- Team with Operators to increase their understanding and establish baseline performance and work standards;
- Develop budget and capital expenditure plans for operational improvements as well as cost comparisons of alternate processes, parts, tooling, equipment or systems within Operations;
- Manage and/or participate in project teams to achieve defined objectives and deliverables through the use of standardized Company processes;
- Perform cost studies, economic comparisons, justification analysis, process validation and maintain necessary documentation;
- Lower the cost of production by eliminating wastes in both manpower and materials;
- Research, develop and implement cost reduction programs;
- Prepare various reports and presentations for Operational and Executive Management;
- Develop, maintain and distribute reports as required;
- Subject matter expert (SME) in equipment design and fabrication process;
- Active in recommendation for best practices and use of technology;
- Teamwork with other engineers, management, operators and with maintenance group in data driven root cause analysis and equipment improvements;
- Generate mechanical designs including specifications and requirements;
- Guide vendors on material selection and fabrication processes;
- Team with electrical engineers and electricians to coordinate and design mechanical and electrical interfaces and controls;
- Mentor other technical staff in their professional development;
- Execute pilot and production release of equipment projects.
